Serum Uric Acid

Serum Uric Acid 5.3 mg/dl 2.4 - 5.7

Method - Enzymatic Colorimetric Test Uricase, Sample - Serum

"Interpretation:

Uric acid is an end product of purine metabolism. An increased serum level of uric acid (hyperuricemia) is found in gout (leading to the formation of sodium urate crystals around joints). Other causes of hyperuricemia are renal diseases, starvation, drug abuse, increased alcohol intake, and certain drugs. Hypouricemia is seldom observed and associated with rare hereditary metabolic disorders."
